2024 Dethlefs/Treffer/C1 Bull Sale

We would like to invite you to our 56th Annual Angus Bull Sale March 28 at the Burwell Livestock Market. A big thank you to all our past customers that have made this possible and we are looking forward to meeting and working with our new ones.

The yearling bulls were once again developed and tested at the Darr Bull Facility. They were fed a ration at 3.5 daily rate of gain but exceeded that with an average gain of 3.98.

The cattle market has been strong this past year and is expected to stay favorable as the cow herds have not increased as of now. The bulls look good and will fit your needs for improvement for what you want. Call us for any questions so we may help you find the best fit for your herd!

Dethlefs Angus Ranch

We are pleased to welcome you to the 56th Annual Production Sale and our 2nd year to be a part of this great tradition!

First, we would like to express how grateful we are for all of the people that support us and you (the customers) that believe in the cattle we are producing. To Dethlefs Angus Ranch and Treffer Angus Ranch, thank you for giving us the opportunity to carry on the tradition of raising high quality Angus cattle and that is what we have for you here today.

The bulls on the sale this year are not only our largest group we have produced but no doubt the highest quality. From top to bottom, we believe that these bulls are extremely useful in terms of improving your next calf crop. Each of the bulls were selected after weaning for their structure, weight per day of age, docility and post-weaning performance. They were also all DNA tested for a higher EPD accuracy.

We have a passion for the Angus breed and strive to blend maternal growth and genetics that will increase your bottom line. Hope to see you in Burwell!

C1 Cattle - Ben & Emily (Dethlefs) Johnson

Welcome to the Sale!

Thank you for your interest in the bulls! While the bulls are from 3 different ranches, with different genetics and management, everyone is family, focused on similar breeding goals. Dutch is Mom's (Delores') little brother. Mom celebrated her 90th birthday this past September and is still living on the ranch at Broken Bow. She still engraves the ear tags and stays very involved.

Our journey with registered Angus has been a marathon and not a sprint. Every year we try to evaluate the cattle and fine tune. Our job as seedstock producers is to identify and balance all the traits that go into profitability and then offer a variety of bulls that will fit your operation's priorities.

We appreciate you and hope you find just the right bull!

Treffer Angus Ranch

2024 Dethlefs/Treffer/C1 Bull Sale

Thursday, March 28, 2024 | 1:00 pm
Burwell Livestock Market | Burwell, NE

The Burwell Livestock Market is located at 401 11th Avenue, Burwell, NE 68823

Auctioneer: Matt Lowery, Burwell, NE | (308) 750-6119

Publication Representatives:

Will Harsh | American Angus Association (740) 272-1386

Cody Nye | Tri State Livestock News & The Fence Post (308) 760-8588

Chris Buetler | Cattle Business Weekly (402) 380-8244

SALE DAY PHONE: (308) 346-4257

BUYERS UNABLE TO ATTEND THE SALE MAY SUBMIT
THEIR BIDS TO THE AUCTIONEER, REPRESENTATIVES OR
BID ON DVAuction.com.

Terms and Conditions:

Cattle will sell under the Standard Terms and Conditions recommended by the American Angus Association. The terms of the sale are cash. All settlements must be made at the close of the auction. Any disputes as to bids shall be settled by the auctioneer, whose decision shall be final and shall bind purchases to the announcement of the sale and sale price.

Special care has been taken to insure the accuracy in the matter of pedigrees and information included in this catalog, but we are not to be held responsible for any error which may appear and is beyond our control. Corrections that may be discovered prior to the sale will be announced at the time of selling.

Guarantees:

All bulls selling for **over \$2500** are guaranteed against breeding injury for the first breeding season. Breeding season is defined as the 90-day period following the first turn-out of the bulls. Please notify us at onset of injury to discuss treatment options.

Notification must be received by the breeder by September 1, 2024. Credit for the amount of purchase price minus \$2500 will be applied toward a replacement bull if one is available or applied to a purchase in next year's sale. The buyer keeps salvage value on the injured bull.

COMPLIMENTARY LUNCH SALE DAY

SELLING

58 Yearling Bulls
11 Fall & Coming
Two-Year Olds

Herd Health:

All cattle were vaccinated with two doses of modified live vaccine including IBR, PI3, BRSV, BVD and Pasteurella, as well as, a Clostridial 7-Way/ Haemophilus vaccination. They were poured in the fall with Ivermectin for internal and external parasites. Out-of-state buyers will be furnished with necessary health papers.

Herd Testing:

All the bulls are guaranteed free of genetic defects which include AM, NH, CA, DD or free by pedigree.

Semen Testing:

All bulls in the sale have passed a strict breeding soundness exam consisting of semen evaluation for motility, morphology, concentration and presence of WBC's. They were also checked to be free of penile warts or persistent frenulum.

Volume Discount:

Discounts will be offered at 3% for three bulls, 4% for four bulls and 5% for five or more bulls.

Free Delivery:

Bulls will be delivered free of charge in Nebraska or if you haul sale day, \$50 will be deducted per bull.

Nutrition:

The yearling bulls have been housed at the bull development center of Darr Feedlots, Inc. They have been fed a high roughage diet to test their performance ability without sacrificing their soundness, longevity or future use.

This is a definite sale feature. He is deep, wide topped and thick. He is in the top 10% of the breed for WW, YW, docility, claw, angle, marbling \$G and \$C. His dam, grand dam and sister have all produced top selling bulls.

Really good bull from end to end. He is deep, long and thick. His dam is built the same and is one of our stoutest cows in the herd.

Double digit calving ease with a 78 pound birthweight. At the same time he is one of the top performing bulls. Top 10% heifer pregnancy EPD and excellent structure. Dam's weaning ratio is 7 @101.

Surpass son with powerful rib shape and long extended front end. He ranks in the top 5% of the breed for heifer pregnancy and top 2% for \$Maternal Weaned Calf Value. Definitely one you can keep heifers out of. While his birthweight numbers are just average, his calving ease EPD ranks in top 15%.

ANGUS

THE BUSINESS BREED

Most of the yearling bulls have genomically enhanced EPD's which provide more accuracy and are parentage tested. The American Angus Association has implemented a program that updates EPD's weekly. We will have any updated information on our supplement sheet!

This sale feature is extremely stout. He is wide based, long sided and very thick from stifle to stifle. He is in the top 4% of breed for docility and it definitely shows in the picture/video pen.

Larger framed calving ease bull. He is clean fronted, smooth shouldered, long sided with excellent growth.

The late Spring and Fall bulls have been grown on our pasture after weaning. They did not receive any grain while on grass in the summer months. They received the same growing ration as our replacement heifers after November 1. They are not carrying any extra condition. There are some really good ones in this group. Do not over look them!

Stylish, well balanced bull that would work on heifers. He is moderate framed, deep and thick from end to end. Excellent set of EPD's.

2023 Joint Production Sale

AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I"; and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. Accuracy will range from 0 to 1 with an accuracy closer to 1.0 indicating higher reliability. Accuracy is impacted by the amount of information that is included in the analysis including individual genotype and performance records as well as number of progeny and ancestral records.

PRODUCTION

Calving Ease Direct (CED), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Dry Matter Intake (DMI), expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the post-weaning phase, compared to that of other sires.

Yearling Height (YH), expressed in inches, is a predictor of a sire's ability to transmit yearling height compared to that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting scrotal size compared to that of other sires.

MANAGEMENT

Claw Set (Claw), expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes compared to another sire.

Foot Angle (Angle), expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth compared to another sire.

Docility (DOC), expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

Pulmonary Arterial Pressure EPD (PAP), expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

Hair Shed EPD (HS), expressed in units of hair shed score, with a lower EPD being more favorable. This indicates a sire should produce progeny who shed their winter coat earlier in the spring and has improved environmental adaptability in heat stressed areas and grazing endophyte-infected (hot) fescue.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability in his daughters. In other words, it is the part of the calf's weaning weight attributes to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, expressed in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny pre-weaning performance from birth to weaning.

Energy Value (\$EN), expressed in dollar savings per cow per year with a larger value being more favorable. It assesses differences in cow energy requirements, due to maternal milk and mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle through the feedlot phase and sell on a carcass-weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.
