Sale Location: 3.5 Miles West of Sheridan, MT
Turn west at Ruby Valley Bank. Stay on the road till after you cross the Ruby River. Take a right at the Y. Take the first left and go up the hill. Watch for signs.

Sale Cattle Viewing:

Bulls will be on display all day Thursday, December 7th and sale day morning. Please, let us know if you'd like to come view the bulls earlier than the 7th.

Conference Call - pre-register to get your bidder number and dialing instructions. Call 406-596-1205 prior to 10 am on Friday, December 8th.

Volume Discounts on 5 or More Bulls!

- 5+ Bulls get 3% discount
- 10 bulls or more get 6% discount

Bull Delivery:

- Free Delivery to central points in Montana or to surrounding states within a radius of 500 miles from Sheridan, Montana.
- Free Delivery to central points within Continental United States on Bull Purchases of \$20,000 or more.
- 500-1000 miles radius - \$300 per bull
- Over 1000 miles radius - \$400 per bull
- Delivery Charges will be added to your invoice at post-sale settlement.
- Bring your trailer and deduct \$50 per bull from your invoice.
- Females will be delivered at cost to central locations.

Terms:

Cattle Sell under the terms and conditions as recommended by the Red Angus Association of America (RAAA).

Dear Friends,

Our family is honored to welcome you to 5L Ranch for the 2023 version of our Fall "Profit-\$eeker" Bull Sale, which features Age Advantage bulls that have been tested for Feed Efficiency and PAP tested to identify their readiness for high elevation service. Well into our sixth decade of raising Red Angus genetics for the commercial beef industry, we've become increasingly uncomfortable with the seedstock industry's singular focus on revenue traits such as growth rate – while ignoring the costs that are increasingly revealed through increased replacement rates and higher cow herd feed expenses. That is especially true in this time of high feed and energy prices. Amazingly, as our cow size moderated, the total pounds of calf produced increased while the energy consumed decreased. In addition to fertility and efficiency, our cows need to be adaptable. In our operation she needs to be adaptable – one summer she may graze at elevation in West Yellowstone, and the next in the badlands of eastern Montana. We find those females with WIDEBODY shape, that can consume lots of low quality forage are the most adaptable and provide more years of service in tougher environments.

Focused as we may be on the cow, last May for the 9th straight year we participated in a structured progeny test where 1600+ females were randomly mated in an effort to prove the next generation of breed impacting sires. The steer progeny from these matings are followed all the way to harvest where carcass data is collected. Through this process sires are proven much faster, the accuracy of our selection is improved, and the predictability of the bulls we offer to our commercial customer is enhanced. This sale features bulls that are 18-21 months old and are developed on a low energy, high roughage ration that optimizes rumen development and foot structure. These bulls are built to last - in big country while covering many cows and producing tons of "GridMaster" worthy calves.

We look forward to seeing you at our Ranch on December 16th. Please let us know how we can better serve your seedstock selection goals.

The very best to you and yours,

Larry, Lisa and Family

FERT (Cow Fertility)
Predicts differences in the number of calves produced by bulls' daughters by the time they reach the age of 8 years. Daughters from a bull with a 2.0 FERT EPD would be expected to produce on average - one more calf by the time they reach 8 years of age than daughters from a bull with a 1.0 FERT EPD.

F:G (Feed Efficiency)
Expressed in pounds of dry feed required per pound of Gain. Progeny from a bull with a 0.00 F:G EPD would be expected to consume 1/4 of a pound less dry matter per pound of gain than a bull with a 0.25 F:G EPD.

This sale will be broadcast live on the internet.

If Your Goal is Profit...Select for it!

Use the Index that best fits your Operation

\$Profit

Developed for operations that raise their own replacements and retains ownership on steers and cull heifers, which are marketed on a Quality Based Grid.

\$Profit assumes a bull will sire 100 progeny over his useful lifespan.

\$Profit Combines all the traits that comprise both \$Ranch and \$Feeder to yield one number that predicts Ranchers' Bottom Lines.

\$Profit Example:

- Bull A has a \$Profit of \$15,000
- Bull B has a \$Profit of \$10,000
- = We would expect Bull "A" to produce an additional \$5000 of profit to the ranch over his service life (\$50 per calf x 100 calves) when compared to Bull "B".

Multi-generational use of \$Profit will move both \$Ranch and \$Feeder in a positive direction, just not as fast as the singular use of \$Ranch or \$Feeder.

\$Ranch

Developed for cow/calf producers who retain their own replacements and market 100% of the steer calves and cull heifers after weaning.

Traits included in \$Ranch:

Fertility, Milk, Weaning Growth, Cow Herd Feed Intake and Mature Cow Size

\$Ranch Example:

- Bull A has a \$Ranch of \$80
- Bull B has a \$Ranch of \$40
- = We would expect Bull "A" to produce \$40 per head increased profit when compared to bull "B" in a cow/calf operation that raised their own replacements and sold all other calves at weaning.

Multi-generational use of \$Ranch will ultimately result in: moderation in mature cow size, improved fertility, modest gains in weaning weight, improved stocking rates and ultimately - increased pounds of calf harvested per unit of feed/land resource.

\$Feeder

Developed to compare how bulls will impact profitability in the post-weaning phase (weaning to harvest).

Traits included in \$Feeder:

Feed Intake, Post-Weaning Gain, Carcass Weight, Quality Grade (Marbling), Yield Grade

\$Feeder Example:

- Bull A has a \$Feeder of \$100
- Bull B has a \$Feeder of \$150
- = We would expect calves sired by Bull "B" to earn \$50 per head increased profit between weaning and harvest when compared to calves sired by bull "A".

Use of \$Feeder in sire selection will maximize Feedlot Closeouts, but with no regard for the cow herd. Thus \$Feeder should be used by herds that purchase their replacement females.

Lot 1 / 435K

Our leadoff bull has checked every box since birth, posting ratios of: 97 birth, 118 weaning, 115 yearling, 128 IMF and 112 REA. Plus, he packages all that performance and quality composition in a moderate frame, massive Widebody package. Lot 1 predicts higher profit, regardless of your marketing strategy with single digit ranks for \$Ranch, \$Feeder and \$Profit.

The average Red Angus bull in this sale ranks in the best 6% of the breed for Fertility, and Lot 31 is even better - so you'll want to keep all his daughters.

The Age-Advantaged bulls we offer in our annual fall sale can cover more cows and will look the part doing so!

New in 2023 - FERTILITY EPD

The Fertility EPD (FERT) predicts differences in the calf crop percentage expected from a bull's daughters! High Fertility EPD bulls will build cow herds with consistently better breed back and deliver a higher percentage of calves to the weaning pen.

Higher Fertility also lowers cow herd culling requirements which reduces replacement rates; which in turn reduces cow herd depreciation costs and provides a larger percentage of the heifer calves that can be sold. As you would imagine, these more desirable outcomes drive HUGE differences in profitability, so the Fertility EPD has tremendous impact on \$Profit and \$Ranch.

The Sale Catalog Data Explanation on the top of page 6 shows where the FERT EPD is presented in the sale catalog. The example below is useful for better understanding the trait units of the FERT EPD.

FERT EPD Example:

Bull A has a FERT EPD of	2.5
Bull B has a FERT EPD of	1.1
	1.4

We would expect the daughters of Bull A to produce on average 1.4 more calves over their first 8 years of production than the daughters of Bull B.

5L

9th Annual Ranch Ready Replacement Heifer Sale

How the Heifer Sale will Work...

- The bred heifers described in lots C1-C3 will sell during the 5L Fall bull sale a just prior to the Black bulls which start at Lot 85.
- Each Bred heifer lot will be divided into “gate cuts” of approximately 10 head. During the auction, successful bidders will be given the option to “roll” successive 10 head packages from the same consignment in order to put together uniform loads.
- Unless otherwise stated, all heifers sell FOB from their respective ranch of origin.
- A pre-sale supplement on DV Auction and the 5L website will provide any breeding or vaccination updates and descriptions of the 10 head packages.
- Payment must be made prior to cattle being loaded.
- Contact Larry Mehlhoff or Greg Comstock at (804) 647-0127 or greg@groopllc.com for more information about the 5L Commercial Replacement Sale.

Lot C1 - 50 head - Commercial Red Angus Bred Heifers

Color: Solid Red

Estimated Average Wt: 900 lb.

Bangs Vaccinated

Calving Date(s): Beginning Approx Feb 15, 2023 for 60 days.

Vacc Protocol: Bovishield Gold VL5 FP prior to breeding and again at preg. check. Dectomax injectible at Preg check.

Bred to: Pasture exposed to elite Calving Ease and carcass merit Red Angus Sires - 100% from 5L.

Delivery: As soon as practical following the sale, but must be moved prior to 1/10/23.

Sale Method: 5 “gate cuts” of 10 head each. Successful bidder may take 10, 20, 30, 40, or all 50 head.

A fancy set of replacements that are almost exclusively 5L genetics, and have the moderate frame and WideBody shape to prove it.

Consigned by: Burnett Livestock • Gil & Jane Burnett, 1132 4000 Rd, Edna, KS, 67342

Ranch Manager: Michael Allison • 620-423-4854 • jmwallison86@gmail.com

Lot C2 - 40 head - Commercial Red Angus Bred Heifers

Color: Solid Red

Estimated Average Wt: 950 lb.

Bangs Vaccinated

Calving Date(s): Beginning May 1 through May 30, 2023

Bred to: Pasture exposed to 100% 5L Sires: 4298581, 4527801, 4528003

Delivery: As soon as practical following the sale.

Sale Method: 4 "gate cuts" of 10 head each. Successful bidder may take 10, 20, 30 or all 40.

A fancy set of replacements that are almost exclusively 5L genetics, and have the moderate frame and WideBody shape to prove it. The Lot C1b heifers are a bit older, heavier, and also came out of females we purchased from 5L.

Consigned by: 4 Suns Ranch • Nick Schultz, Grass Range, MT • 406-928-8147

Lot C3a - 30 head - Commercial Red Angus Bred Heifers

Color: Solid Red

Estimated Average Wt: 950-1000 lb.

Bangs Vaccinated

Calving Date(s): Beginning March 1, 2023 for 45 days

Bred to: AI and/or natural service bred to 5L herd sires that excel in calving ease, carcass merit and cow herd profitability

Delivery: As soon as practical following the sale.

Sale Method: 3 "gate cuts" of 10 head each then one cut of 5 head. Successful bidder may take 10, 20 or all 30.

Lot C3a - 30 head - Commercial Black Angus/BWF Bred Heifers

Color: Solid Red

Estimated Average Wt: 950-1000 lb.

Bangs Vaccinated

Calving Date(s): Beginning March 1, 2023 for 45 days

Bred to: AI and/or natural service bred to 5L herd sires that excel in calving ease, carcass merit and cow herd profitability

Delivery: As soon as practical following the sale.

Sale Method: 3 "gate cuts" of 10 head each then one cut of 5 head. Successful bidder may take 10, 20 or all 30.

Consigned by: 5L Red Angus • Larry Mehlhoff & Family

406-842-5693 (office) • 406-596-1204 (cell) • 5lranch@3rivers.net

Profit Plus

(5L's Black Red carriers) have been instrumental in the development of out-cross Red Angus genetics, by incorporating high accuracy Angus carcass genetics into Red Angus' Total Herd Reporting Database, which is better suited for prediction of reproductive traits. The benefits of combining the best of both Red and Black populations are shared by both Red and Black bull customers. Black

Angus herds will still have almost entirely black calf crops but will access superior out-cross maternal genetics. Red Angus customers should expect approximately 50% Black calves when these bulls are used on solid Red Angus cow herds.

5L genetics have spanned the globe, but our neighbors in the Ruby Valley have built some amazing commercial Angus (Red & Black) cow herds - that are ideally adapted to Southwest Montana - through using 5L bulls

5L "Opti-Bulls" ...

Heterosis and breed complements are powerful tools. Here at 5L we've spent the last few years developing a product, which will make these tools more accessible as well as more user friendly to our customers. We have identified Charolais genetics that can complement the highly adaptable, maternally balanced and high carcass value genetics of our Red & Black Angus. When combined with 5L Red Angus, the resulting hybrids' genetic makeup will support faster gains, more efficient feed conversion, consistently heavier out-weights, increased dressing percent and capture of yield grade premiums – and they'll still hit the Quality Grade targets 5L genetics have been known from. These bulls are Buckskin in color. They are relatively moderate framed. They are definitely Wide-Bodies, and their dispositions fit within our Red Angus pens. They represent an optimum balance of traits and a user-friendly means to harvest heterosis and capture optimal levels of additive genetic variation available through the Charolais breed. We call them "Opti-Bulls" and they are just one more user-friendly tool 5L provides for our customers' toolboxes to help ensure their continued economic viability.

Lot 96 / K619

Casey St Blanc

Lot 96 begins a short run of Purebred Charolais Bulls. These bulls will provide maximum heterosis when mated to straight Angus/Red Angus cow herds. They will also should make significant improvements in Yield Grade, Feed Conversion, ADG and Carcass Weight.

5L & 9 Mile "Previously Untouchable" Embryo Matings begin on page 38.

Pulmonary Arterial Pressure (PAP) testing is used in cattle as a predictor of susceptibility of High Mountain Disease (HMD). There are many factors that can lead to the presentation of disease in individual animals but the PAP test currently is the gold standard for testing genetic and environmental components of the disease as all animals with a high PAP test may not show outward signs.

Key Factors in Understanding PAP Scores:

Elevation does matter: As elevation increases the likelihood of cattle becoming hypoxic and elevating their PAP score increases. Scores taken below 5000ft are less reliable than scores taken over 5000ft as a small number of cattle are hypoxic at lower elevations. As cattle increase elevation over 5000ft the hypoxic state of their lungs increases therefore increasing the reliability of the PAP score. The longer the cattle being tested live at those elevations the more reliable the test becomes. Generally animals living at increased elevations for less than 30 days and tested are not considered reliable. Ideally animals to be tested at elevation will be in that environment for a minimum of 45-60 days.

Age does matter: As cattle mature they undergo many changes in their cardiopulmonary system affecting the PAP score. These changes can positively or negatively influence the PAP score. Testing of cattle at young ages should only be used as a management tool; it has more variability and less reliability and accuracy than testing of older cattle. It is ideal to test cattle that are at least 12 months old and as cattle reach 18-24 months of age there is an increased reliability of the test for that animal at that elevation.

Once cattle are over 2yrs of age there is typically very little change in their PAP score unless other environmental factors have contributed to an increase. (respiratory infections, intensive feeding programs, cardio toxic plants etc.)

Picking your ideal animal based on PAP Score:

PAP scored animals should be evaluated in ranges rather than in specific numbers. Through testing we have found that for similar elevations many animals over a score range (2-4pts) have the same likelihood of succumbing to HMD. Furthermore the accuracy of the testing equipment is +/- 1 point. Don't let your ideal animal get away for a few points on the PAP score. If the ideal score for your elevation is a 42 consider all animals below and up to a few points above that score. Animals that score 50 and above should not be used in higher elevation settings as they are highly likely to contract HMD. Even at higher elevations there is a percentage of lower testing animals that will have increasing scores and show outward signs of HMD. As the elevation increases this percentage decreases and improves the accuracy of the score. This is why it is ideal to retest your animals once they are at increased elevations for the recommended period of time.

Final Thoughts:

1. Test animals at higher elevations to increase test accuracy.
2. Testing of older cattle increases test accuracy.
3. Choose animals for consideration in point ranges rather than specific test points.
4. Choose animals that live longer at increased elevations over 5000 ft to increase reliability of the test.

The "Untouchables" 9 MILE & 5L

ET Matings that will continue to make a Difference:

Lots 301 - 312

We will share matings from some of the breed's most highly sought sires that we've paired with some of our most influential dams.

Each Lot will offer a package of 4 embryos. Winner bidder pays 3 times the bid price and gets the 4th embryo as a guarantee.
