

26TH ANNUAL PRODUCTION SALE

Friday, March 15, 2024 • 12:30 pm CST

at the Ranch near Elmdale, KS

115 - Age-Advantage Red Angus & SimAngus Bulls

60 - Red Angus & SimAngus Yearling Bulls

60 - Fall Bred & Open Spring Commercial
Red Angus Cows and Heifers

8 - "U-Pick-Em" Elite Registered
Red Angus Open Yearling Heifers

Your Source for Trouble-Free, Low Input Genetics!

SALE SCHEDULE SALE SCHEDULE

Mushrush Sale Week Schedule:

- March 13th** If you even think you may be bidding on DV Auction, get registered and check it out by today! Determined by weather - cattle will be penned into small viewing pens by evening. Prior to that, they will be available for viewing onsite in their rugged quarry environment.
- March 14th** Cattle in sale pens for viewing. For anyone looking at cattle Thursday evening, we will have a **Prime Rib dinner** (*details below*).
- March 15th** 8:30 a.m. Coffee & donuts
11:00 a.m. Lunch will begin to be served
12:30 p.m. 26th Annual Spring Mushrush Ranches Production Sale

Scan the QR Code to Learn how we've become your source for low Input Genetics

You're Invited!

What: Pre-sale dinner and social

When: Thursday, March 14th at 6:00 p.m.

Please join the Mushrush Family at the sale barn for a prime rib dinner and informal beef cattle conversation.

GENERAL INFORMATION

Annual Production Sale

March 15, 2024 • 12:30 pm CDT • at the ranch near Elmdale, KS

Check our Website often for videos, online catalog, sortable data and any updated sale information.

Auctioneers: Sonny Booth, 918-533-5587
Charly Cummings, 620-496-7108

Sale will follow catalog order. The auction will move right along and should be done within a couple of hours.

Veterinarian: Rocking KM Vet Service - Dr. Kathryn Miller,
Dr. David Rethorst: 620-767-5914
Cross Country Genetics, Dr. Joel Anderson: 785-457-3336

Herd Health: Herd health is excellent. All cattle have been vaccinated and boosted with modified live IBR, BVD-PI3, BRSV and 7-way. Heifers have also been vaccinated for Lepto 5 and Vibrio. They have also been treated with dewormer. All cattle have tested negative for BVD-PI. All bulls have passed a BSE and semen evaluation.

Hauling Rebate: Bring your trailer to the sale and receive a \$100 rebate per bull. Any bull(s) destined for a state that requires a Trich test to enter will be tested, at our expense, on March 18th, but will not be able to leave sale day. You may bring your trailer back within 7 days of the test results to receive your haul rebate. Please see Trich explanation on page 6 for full details. There is no trucking rebate on the heifers.

Delivery: We offer free delivery on bull purchases for the first 700 miles and free delivery anywhere in the continental U.S. FOR TOTAL BULL PURCHASES OVER \$30,000. Delivery for purchases under \$30,000 but over 700 miles will be at cost for only those miles over 700, prorated among bulls still on the load. Please provide a facility where we may unload, sort, and reload. If unable to, please make an arrangement with a neighbor, salebarn, etc. We make every effort to get your bulls as close as possible, usually right to your place. However, because some deliveries are made with a 53' ground load or pot belly trailer, we may consolidate deliveries to one location in the general area. On some long distance deliveries, we may ask you to meet our truck to lessen the time animals are in transit. Please have other cattle near unloading area so bulls are not alone. All deliveries and injuries are at buyer's risk unless the optional Bull Warranty (see page 6) has been purchased. Heifers are FOB Strong City, KS, but we can help arrange delivery at a reasonable cost.

Free care: In lieu of free trucking, buyers may leave bulls in our care, at buyer's risk, until May 1, 2024 at no charge.

Insurance: If you want insurance please talk to your agent, or see page 6 for our Bull Warranty.

Retained Semen Interest We are selling an undivided half interest, full possession, and full salvage value in these bulls. This is so we can use some of the bulls in herd and reserve the right to collect and market semen on these bulls. Collection will be during the off season, at our expense, and the buyer's convenience.

• Volume Discounts •

Purchase 5 or more bulls and get 1% discount per bull up to 10%
Example: Purchase 5 bulls and get a 5% discount
Purchase 8 bulls and get an 8% discount

Mushrush Red Angus Phone Numbers:

Joe.....620-340-7461
Daniel.....620-340-9774
Greg Comstock*.....804-647-0127
**unbiased third party evaluation of sale cattle*

Ring Men:

Kansas Stockman.....Stephen Russell 785-458-2650
Stock Exchange.....Doug Paul 405-820-3982
Stock Exchange.....Guy Peverly 785-456-4390
Special Assignment.....Brett Spader 785-633-5512
Red Angus Association.....Taylor Ohlde 913-626-2715

Absentee Bids:

Absentee bids may be placed by phone and email. Contact Joe Mushrush, Daniel Mushrush, or Greg Comstock. Please contact us before the day of the sale at the latest, so we have adequate time to give you the attention you deserve. Together we can prepare a confidential bidding plan to best accomplish your wishes. Every year more and more customers are buying their genetics this way, with complete satisfaction.

This sale will be broadcast live on the internet.

USING THE SALE CATALOG...

Our program: Trouble free efficient fertile cows has always been our focus. We concentrate on the female because that is the foundation for everything else you might want to do. Bulls are developed to manifest differences, not for the most gain. Having two herds of identical genetics in two separate seasons has allowed us to see real time the importance of using data to create EPD's and Indexes to compare across contemporary groups. We manage our Fall and Spring herds differently due to environment and available feedstuffs. Those two variables directly impact actual weights, sometimes radically. Just because we focus on the female does not mean our cattle will possess inadequate growth or carcass traits. See page 36-37 for real world examples of 7 consecutive years of our feedlot results.

Your Plan: To get the genetics you need find a seedstock provider you trust. One who reports lots of data into meaningful contemporary groups. We hope you choose us! Think about your genetic needs. Do you need a cow freshener, a genetic changer, or genetics that maintain what you currently have? Know the limitations of your environment and management, and make sure your cow herd fits. Someone who works off the site and sees the cows before sunrise or after dark has different needs from the ranch that develops their own replacement heifers and makes a living from the cows. The corn farmer in Missouri has very different selection criteria than the rancher in New Mexico that runs a pair on 58 acres.

Frame Score is reported in our catalog as **Moderate**, **Moderate+** and **Moderate-**. Given our mature cow size we believe our Moderate frame is about a 5. Because of seasonal nutritional differences, Fall born calves in the Flint Hills express their growth curve differently compared to those born in the spring. We have found actual hip height adjusted to a year to be fundamentally inaccurate.

Dam Information: We have always endeavored to describe the dam of every bull in the sale. How we do this continues to evolve as increasingly meaningful tools become available. Again in 2024, we will provide dam's MPPA (Most Probable Producing Ability) which compares the repeatability of that cow's production as measured by her calves' relative weaning weight in our program.

We collect the actual weight on every cow annually, and provide that data on the dam of every bull in the sale. We give that weight greater context by also providing the Age of Dam (AoD) as well as the Body Condition Score (BCS), which is taken at the same time as the cow weight. While this has been a reliable tool to share differences in the size of bulls' dams with our customers, this year, we're introducing a new, more powerful tool to help identify genetic differences in mature cow size - Mature Weight EPD.

Mature Weight EPD is a EPD that is available due to our participation in \$Profit. The Mature Weight EPD (MW) predicts expected differences in the mature weight of bulls' daughters. Understandably it has a significant impact on both \$Profit and \$Ranch. Mature Weight contributes both to Revenue and Expense sides of the profit equation. Larger Mature cows do bring more at salvage, but they eat more every day. The Mature Weight (MW) EPD will be published on each bull, along with a percentile rank to make it easier to compare bulls' genetic differences in terms of the anticipated mature weight of their daughters.

The Cow Fertility EPD was added to the \$Profit and \$Ranch indices last year. By itself, the Fertility EPD predicts differences in the number of calves weaned by bull's daughters. Using High Fertility EPD bulls across the herd will build cow herds that result in higher calf crop percentage weaned, reduced culling requirements, reduced replacement rates, thus lower cow herd depreciation costs. Together these drive HUGE differences in profitability.

Fertility EPD Example:

- Bull A has a FERTILITY EPD of 2.0
- Bull B has a FERTILITY EPD of 1.0

We would expect daughters of Bull A to produce 1 more calf during the first 8 years of their life when compared to daughters of Bull B.

Selection Indices: Red Angus indices are built using EPD's that often have very little actual data supporting them. To provide a more meaningful index with far greater data density of data used in calculating the supporting EPDs, we have added \$Profit to our selection suite. Pages 7 - 9 features an explanation of \$Profit, it's components and how to use these tools in selection. Like our Red Angus EPDs, those EPDs and indices produced by the \$Profit team come with percentile ranks, which can be very useful - especially if you are unfamiliar with a specific EPD or index.

Parental Validation and Genomic Enhancement have been completed on all Registered Cattle in this sale.

Supplement Sheets will be available for the Spring bulls that were scanned for carcass merit on February 20, 2024, which is too late for the information into EPD calculations for this catalog. This sheet will also include out cattle. A Female supplement sheet will be available with lot information and calving expectancy after the preg check February 27, 2024. Please check our website frequently for the most current and up to date copy of each of these supplement sheets.

A sortable spreadsheet with catalog data will be made available our website www.Mushrushranches.com

DOCILITY SCORING, TRICH TESTING, BULL WARRANTY

We evaluate every bull in our sale for Docility and assign each a numerical score. While several breeds currently calculate a docility EPD, there is no standardized method for data collection.

We used the following technique:

Each bull was removed from his contemporaries, put into a 12' wide sorting alley and made to stand by himself between two people that were approximately 20-25' from one another. Because this is a subjective measure, it was important that the same person scored every bull (similar to other subjective measures like udder scores or Body Condition Scores). The bulls were evaluated and scored 1-5 depending on their level of comfort with human interaction under mild pressure and in a somewhat confined space. We share each bull's Docility Score with their sale catalog lot information.

Explanation of Docility Scores

1. Very Comfortable (stands quietly, chews cud)
 2. Comfortable (Walks around)
 3. Less comfortable (Walks faster, respiration may be elevated, not happy but accepting of mild pressure)
 4. Nervous (Bull wants to return to herd-mates, may attempt to run past with little to no pressure)
 5. Very Nervous and/or Aggressive (puts people on the fence).
- NOTE:** Animals that score "5" are culled and not offered for sale.

Scan the QR Code to watch a demonstration of Docility Scoring Bulls for the Annual Mushrush Sale.

Trichomoniasis Testing will be completed on bulls for all states that require a Trich test. This will be done after the bulls are purchased at our expense. If you are unsure as to what your state requirements are, please call us and we can help determine whether your bull(s) will require a Trich test. The chance that you will infect your cow herd with Trich by purchasing a bull from any reputable seedstock provider is almost nonexistent.

The Mushrush Red Angus Bull Warranty *Optional protection against injury or death of your bull*

All Mushrush bulls are guaranteed for Breeding soundness, Structural soundness, and disposition (see terms and conditions). If you would like to add coverage for injury or death of your bull, you may purchase the optional Mushrush Ranches warranty. We would like to emphasize that this is not insurance (like that purchased through a broker), rather an additional service offered to our customers.

- Coverage is good for a period of 5 months following purchase.
- Cost is 5% of the purchase price paid at settlement.
- Details and limitations available at checkout.
- In the event your bull is permanently injured or dies, you receive credit towards the purchase of another bull in the amount of the original purchase price minus any salvage.

Example: You purchase a bull for \$4000 at the March 15, 2024 sale and buy the warranty for \$200. He gets injured on May 31st. You sell him and get a credit for \$4000 minus what he brought when you sold him. If he died it would have been \$4000 credit towards your replacement bull purchase.

If you want to increase Profit... Select for It!

You don't last 40 years in the Red Angus seedstock business without your customers' profitability being your Top Priority.

That's why for the better part of the last year, we've been working behind the scenes to assimilate the Mushrush cow herd inventory and data into the Leachman \$Profitshare database, which provides access to cutting edge genetic selection tools. You may have heard of the economic selection index, **\$Profit**, which quantifies differences in profitability of each animal's genetic contribution to the beef supply chain, but this system will provide Mushrush Ranches and our customers with even more useful and tailored tools to help make the best informed selection decisions! For example: **\$Ranch**, is a profitability index designed specifically for cow/calf producers, who sell calves at weaning and raise their own replacements - this describes the vast majority of our bull customers! We will also provide the new Fertility EPD pioneered by Zoetis which predicts variation in cows' lifetime production as well as identify which bulls' daughters produce the highest calf crop percentage. For years we have scored and ranked our own cattle for udder quality, foot structure and docility, but now the \$Profit system will provide genetic prediction tools to quantify the genetics which produce those phenotypic outcomes that we strive for and that our customers demand.

How \$Profit Works: \$Profit assumes that the average commercial bull will sire 100 progeny over his lifetime, that 30% of the replacements will be retained and that the rest of the heifers and all of the steers will be finished and sold on a value-based grid. Even though many ranchers sell their calves at weaning - and don't own them all the way to harvest, we have seen feedlots' willingness to pay for calves from genetics recognized for superior post-weaning value.

Example:

- Bull A has a \$Profit of \$15,000
- Bull B has a \$Profit of \$10,000

We would expect Bull A to return \$5,000 (\$50/head x 100 calves) than Bull B. This benefit would be the cumulative advantages of both Bull A's progeny that went into the feedlot as well as daughters that were retained as replacements.

What traits are included in \$Profit?

Think of \$Profit as a genetic accounting tool - adding up all of the revenue generated from some traits, and subtracting all of costs incurred by others.

Revenue Traits:

- Lower Birth = Easier Calving/More Live Calves
- Weaning & Yearling EPD = More payweight
- Fertility = more calves produced over a cow's lifetime
- Carcass Weight = worth more up to 1050 lbs.
- Marbling = valued based on grid premiums
- Ribeye area = value as impacts Yield Grade
- % Retail Product = more yield is more meat

Cost Traits:

- Cow Mature Size = in general, bigger eats more
- Cow intake = increased feed intake means increased costs
- Feed Efficiency = cost of Gain
- Carcass Weight = Discounted if over 1050 lbs.

Scan to learn more about the tools our family uses to advance our profitability.
Call Daniel: 620-340-9774

Breed more Profit

2024 is our 41st year of supplying Red Angus genetics to the beef industry. We have always believed that sustainable profitability begins in the cow herd. Now we have the BEST selection tools yet, to describe genetic differences in that complex of traits that influence profitability for cow/calf operations.

In our June 2023 Mushrush Ranches newsletter we announced our utilization of the \$Profit suite of economic selection indices and related genetic selection tools and explained how \$Profit, quantifies differences in profitability of each animal's genetic contribution across the beef supply chain. Many traits (both cow-herd and post-weaning) go into \$Profit. For producers who raise their own replacements and sell calves at weaning, we believe no index describes your profitability scenario as aptly as \$Ranch. It combines both the financial rewards and expenses generated from all those traits that impact profitability for a cow/calf operation: Fertility, Cow Feed Intake, Calving Ease, Milk, Weaning Weight, Mature Cow Size, Longevity

\$Ranch accumulates profit when cows' production/reproduction provides positive answers to these questions:

Market:

What does her Calf Weigh? **MORE**

What is her Calf Worth? **MORE**

Reproduction:

Calving Ease/Live Calf? **EASIER CALVING (More Live Calves)**

Breed at 15 Months? **YES**

Breed Back after calving? **YES (to calve earlier in the calving season)**

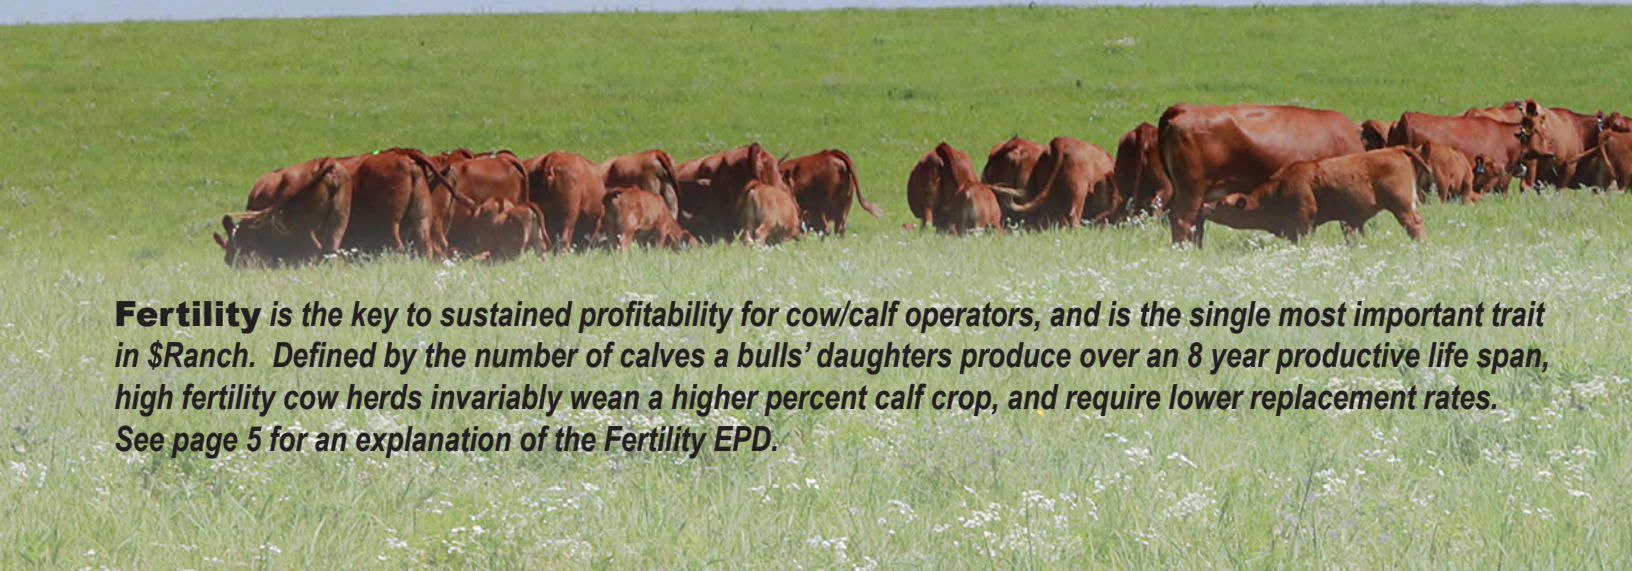

Longevity:

Stay in the Herd? **LONGER**

Cow Costs:

How Much Does she Eat? **LESS**

Depreciation Costs/Replacement Rates? **LOWER**

Fertility is the key to sustained profitability for cow/calf operators, and is the single most important trait in \$Ranch. Defined by the number of calves a bulls' daughters produce over an 8 year productive life span, high fertility cow herds invariably wean a higher percent calf crop, and require lower replacement rates. See page 5 for an explanation of the Fertility EPD.

into your Cow Herd...

PICTURE OF SUCCESS: 3 1/2 Year-Old Mushrush Red Angus cow getting ready to wean an A.I. sired calf born at the beginning of the calving season. She's bred back to have her 3rd calf as a 4-year-old, and has maintained her Body Condition to make it through the winter.

What \$Ranch will do for your program...

\$Ranch doesn't sell out your bottom line just for bragging rights about heavier weaning weights. Instead selection for \$Ranch will move herds towards these higher profit outcomes:

- Improved stocking rates
- Increased calf crop percentage
- Lower cow depreciation costs due to lower replacement rates
- Lower cow herd maintenance costs
- Increased pounds of calf produced per acre

Watch & Bid Online for FREE at DV Auction!

We are pleased to offer the Mushrush Red Angus Sale broadcast 'live' over the internet through DV Auction Services. To bid from your computer at home during the sale, simply complete the following steps:

1. Visit the DV Auction web site at www.dvauction.com.
2. Click on the "Register" tab and enter a user name, password and your contact information.
3. Click on "Apply for Bidding." Select the Mushrush Red Angus Sale from the list of sales and click "Apply".
4. Complete the process by filling out the Banking and Lending information requested.

DVAuction will contact you once you have been approved to bid and buy at the sale "live" from your computer at home. We will also provide you with a buyer number for the sale. After the sale, Mushrush Red Angus will contact you to make arrangements for payment and delivery of your online purchases. There is no cost to watch or purchase online! Please be sure to apply for bidding by March 13, 2024.

Proxy Bidding-If you can't access a computer during the sale, you can now place a "proxy bid" through DV Auction. Simply follow the instructions listed above, and as the sale date nears there will be a Proxy Bidding link under the sale listing on the main page of DV Auction. You can then place the maximum amount that you'd like to bid, and our system will represent your bid just as if you were there.

Please Note: You must have high-speed internet access (DSL, T-1, or Broadband) to be able to bid during the sale. If you have any questions, please contact DV Auction at 402-316-5460 or email support@dvauction.com

This will be a video only sale, no animals will pass through the ring! All animals will be penned at the sale facility for inspection prior to the sale and throughout the auction.

This sale will be broadcast live on the internet.

AGE-ADVANTAGE RED ANGUS BULLS

18-month-old Fall Bulls

In our quest to provide you bulls with proper development for years of trouble-free service, we have changed our development protocol on these Fall born bulls. After the traditional 205-day weight was taken in early April, the bulls were turned out with their mothers on 2600 acres of native tallgrass range on the neighboring Tallgrass Prairie National Preserve.

Weaning was delayed until about 10 months of age. The bulls were then placed on Grow-Safe bunks, eating a high roughage diet, to measure the individual feed efficiency of each bull. Following that the bulls were turned out in our rugged rock quarry traps where they learn to travel over rough, rocky terrain while developing muscle and bone.

What is the advantage for you? You invest in fit athletic, hard footed bulls that know how to forage and travel – bulls that will not melt away and have the libido to go out and service lots of cows for years to come. Yes, a pampered feedlot bull will have a higher yearling weight. If you are concerned about the growth potential of these cattle see the past 7 years of closeout results from our cattle fed at Hy-Plains Feedyard on Pages 36-37. Those are real world results.

Fall SimAngus Bulls are: Lots 10, 11, 12, 27, 28, 29, 45, 46, 67, 68, 86, 87 and 95 and are identified with Red Sale Catalog Templates.

Fall Black/Red Angus Bulls are: Lots 25, 26, 39, 80 and 81.

We believe that profitability starts in the cow herd, and there it is driven by pregnancy rates, live calf percentage and optimizing stocking rates to available forage. Our leadoff bull is ideally suited to deliver each of those goals. Just look at his elite percentile ranks for Calving Ease, Heifer Pregnancy, Maternal Calving Ease, Fertility and \$Ranch. Even better, he adds value to the calf through best 4% ADG, with exceptional ranks for pay-weight, marbling and REA. This could go down as one of the most important lead-off bulls in our 26 years of bull sales.

Whoever thinks elite Profit index cattle come with poor phenotype - has never seen Lot 2. He is Powerful! But as good as he looks, his data reads even better. We love the fact that he predicts to add significant weaning, yearling and ADG - but his mature weight (MW) EPD predicts only average cow size. His Fertility EPD is beyond the top 1%, so it's no surprise his 105 MPPA dam weaned her 5th calf more than a month before her 6th birthday.

Here's a half-brother to our leadoff bull, and like Lot 1, a strong Fertility (FERT) EPD and a reliable dam that dropped her 4th calf before her 5th birthday. His sire, Top Tier is deceased and the semen is all but gone so these sons are going to play an important role in continuing this important sire line that was gone by the time we realized how good he was. Like his old man, Lot 3 predicts to improve Fertility, Calving Ease, Feed Efficiency and Profit. And, he puts positive pressure on growth and carcass merit while reducing mature cow size.

We sell them by the pound but buy feed by the ton! So, finding bulls like Lot 4, with huge genetic potential to improve feed efficiency is why our family has invested significant resources to test for Dry Matter Intake (DMI) and Feed Efficiency (F:G). This Titan son ranks in the best 1/10th of 1%, so he should have your herd selling more pounds while lowering the feed bill in the next generation.

Heifer Bull Deluxe! And, you're going to want to keep every one of the daughters. Just look at Lot 5's breed leading predictions for Calving Ease, Fertility, and Heifer Pregnancy rate. Plus, he comes with a mature weight prediction that should allow you to increase stocking rate in the next generation - no wonder he's the highest \$Ranch sire in the entire offering. His 105 MPPA dam, D077 is one of our best Impact daughters, and has several sons by different sires spread throughout the sale offering.

The Ultra Kool sire group will work anywhere, but we especially think with their slick hair coat, moderate frame and body capacity, they will be superior to many bloodlines in fescue country. The above combination of traits fits Lot 6 to a tee. We expect him to be a calving ease sire that populates your pastures with moderate framed, easy fleshing daughters.

Uniformity is one of the easiest ways to add value to a calf crop and profitability to a cow herd. If you have a larger group of cows that need moderation, depth of rib and fleshing ability package up two or three of these Ultra Kool sons to use in a multi-sire pasture. Lots 7 & 8 would work great on a set of wet 2-year-olds. They are both quite docile and excel for Fertility and \$Ranch.

Our Lead-off SimAngus bull will run right with his Red Angus herdmates for calving ease, marbling, fertility and mature cow size. Plus, he comes with a shot of heterosis that will add lifetime productivity to the daughters you retain as replacements. He has been in front of the pack since weaning when his 119 weaning ratio gained some notoriety. He left his contemporaries in the dust after weaning by posting ratios of 120 yearling, 122 ADG, 102 IMF and 121 REA. All that power and he still ranks very high for replacement females - check out his \$Ranch value.

It's important to consider that \$Profit and \$Ranch are relatively new metrics at Mushrush Ranches.

We haven't been specifically selecting for these values for multiple generations. But, we have been selecting for good uddered, highly fertile, easy fleshing, structurally sound cows and making them compete against each other in large meaningful contemporary groups. When we joined \$Profit, the **FERTILITY EPD** and **\$Ranch** found us! Specifically it verified that we had a large percentage of our herd on the desirable side of the bell curve for those traits.

Bulls like Lot 43 and 44 are truly elite for \$Ranch and Fertility.

Approaching the half-way point of these Age Advantage bulls, we find this powerful Hollywood son with an easiest calving 6% to heaviest weaning 6% spread. After getting flushed and making several bulls in the sale, his dam, D077 raised this natural calf before heading right back into the donor pen.

An excellent bull to use on running age cows. One of the very best in the sale to improve Feed Efficiency, and he should make moderate, fertile productive replacements as indicated by his MW (mature weight) and Fertility EPDs and his 109 MPPA dam.

We got aggressive with some outcross sires for this year's sale. Perhaps the "freshest" blood in our pedigrees is an older bull who came all the way from Australia in Te Mania Red Label. Lot 55 is a highly feed efficient bull that would work well on a set of wet 2-year-olds or mature cows.

If you don't already have a pasture full of Icon daughters, you probably need to own this bull. Few bulls in this or any sale offering make such a positive contribution to so many economically relevant traits. This "curve-bender" combines the lowest 6% for birthweight with a yearling weight in the top quarter of the breed yet reduces mature cow size all while improving feed efficiency (F:G) and fertility (FERT).

Study Lot 64's combination of weaning, yearling and Feed Efficiency (F:G). Basically, he'll produce more pounds, but will require less feed to do so. His 8-year-old dam is rock solid with a 365 day calving interval and a 114 MPPA.

Ultra Kool 86H stamps his progeny with depth and spring of rib, width through the stifle when viewed from behind and a very appropriate slope in his front shoulder. You wouldn't think a calf that weighed 58 pounds at birth would grow to take the above picture, but that is how this sire group performs.

Everytime we feature another 2 or 3 Hollywood sons, we start off with one that reads like he should have been in the first 10 lots, and Lot 67 is no exception. His dam maintains a 372 day calving interval and a 105 average progeny weaning ratio.

W.J. Stovall from Augusta, Kansas, was getting by with his non Mushrush bulls but was ready for the next step in 2020 for his 300 cow commercial herd. When other people dialed back on risk, he took the opportunity to completely turn over his bull battery with Mushrush Red Angus bulls. Since then he has purchased bulls and bred females on an annual basis building his new genetics into both sides of his pedigrees. The results were impressive, and he was able to see a significant improvement in his herd's productivity and profitability.

"Our goals were met 100%." Weights were up by 25-80 pounds per calf and the bulls did their jobs getting his breedback improved. From 2021 to 2023, his conception rates jumped from 88% to 98% with the vast majority being in the front of the season. "This fall's breedback was the most exciting. 2 cows in 130 were open. We think these pregnancies will be some of the most valuable we have had in a long time. This was in a summer of D4 drought when there were wrecks all around us."

"Mushrush Red Angus bulls have increased breed conformity and structure for both heifers and steers. The calves are the winning combination of eye appeal, depth, bone, and structure." It isn't going unnoticed on sale day where his calves are selling for top dollar at Farmers and Ranchers in Salina, KS. "We credit this to a total change to Mushrush Red Angus genetics".

- WJ Stovall, Stovall Land and Cattle, Augusta, Kansas

If you are a new Mushrush customer these Icon sons are a great place to get started. We love the problem-free daughters and Icon improves two of the most economically important traits: feed efficiency (F:G) and Fertility (Fert). Here's one of the best bulls at both of those traits, 78 lots deep into the Age Advantage bulls.

Here's an Age Advantage bull that should cover a lot of heifers, and you'll want to keep all of the heifer calves as replacements. Just look at Lot 91's superior ranks for: Feed Efficiency (F:G), Heifer Pregnancy, Maternal Calving Ease, and \$Ranch.

Lot 95 - "Chug"

If you follow us on social media you have seen "Chug" come of age. He started out as a way too friendly young calf that loved to eat cubes. Now he is a friendly aged bull, who still loves to eat cubes. He will follow a bucket.

ADG (Average Daily Gain) and Dry Matter Conversion are indicated by red arrows pointing to the 'GAIN/HEAD/DAY' and 'CONVERSION FACTOR' values respectively.

The close-out picture above details the performance and feed conversion of the heifers fed in the winter of 2022/2023 at Hy-Plains Feedyard in Montezuma, KS. The table on the opposite page shows the results of seven consecutive years of our cattle fed there. Proof that Mushrush Ranches bulls sire calves that excel at growth and efficiency, reaching optimum market weights while keeping Mature cow weights and costs in check.

Trust Us, All the Growth & Carcass you will ever need

It seems that everywhere you look cattle are being promoted for growth and marbling.

Growth and carcass, Growth and carcass, more.....more.....more..... to what end?

To start, your environment is very likely unable to support extra growth. Your weaning weights will change very little but your mature cow weights will increase as you select for more weaning and yearling weight.

The Result: Bigger harder doing cows that require more feed and are harder to breed back, resulting in More open cows = More expense and less income.

At Mushrush Ranches our focus is on moderate sized, efficient, fertile genetics carefully picked to do more with less. Our average cow weight at weaning in both Fall and Spring herds for 2022 was 1155 pounds in a Body Condition Score of 5. *(First calf heifers were excluded as they are still maturing.)*

Are these genetics too small to excel in performance in today's cattle industry?

Below is feeding and carcass results from 7 consecutive years of our cattle at Hy-Plains Feedlot, Montezuma, Kansas:

Birth Yr.	Sex	DAYS on FEED	Pay Weight	ADG	Dry Conversion	%Choice & PRIME
2017	Heifers	127	1420	4.55	5.72	94.0
2018	Heifers	111	1453	4.67	5.36	97.1
2019	Heifers	109	1409	4.68	5.80	92.8
2020	Heifers	121	1416	4.07	6.19	100.0
2021	Steers	125	1567	4.81	5.46	95.4
2022 [1]	Heifers	111	1379	4.70	5.48	97.4
2023	Heifers	127	1411	4.11	6.08	95.7

You Have Seen Cattle Promoted on Carcass Premiums. How about "Efficiency" Premiums?

[1] Cost of gain on the 2022 heifers was .176/pound less than the yard average (including steers). That's a \$92.82/head advantage. It is no wonder Mushrush sired calves and feeders usually receive a premium when identified as such!

SPRING YEARLING RED ANGUS BULLS

Spring Bulls - Feeding Spring Born bulls offered as yearlings is a delicate balance. We have to feed them hard enough to manifest differences in growth and carcass traits but not so much as to make bulls fat and unfit. That said, our Spring yearling development ration is extremely high roughage, including only 35% concentrates (whole corn and DDG). As with the Fall born bulls, these Spring yearlings are allowed to roam in large traps, getting plenty of exercise to get into condition to handle large groups of females without falling apart.

Spring SimAngus Bulls are: Lots 114, 124, 125, 126, 147, 148, 159, 160 and 161 and are identified with Red Sale Catalog Templates.

Scrotal measurements on the spring bulls were taken after the catalog went to press. Scrotal measurements will be available on a supplement sheet, and available on our website: MushrushRanches.com

Spring Bull Ultrasound - The spring bulls were not ultrasounded in time to get that data into the sale catalog. Thus, the EPDs in the catalog do not reflect phenotypic variation for Ribeye Area (REA) or percent intramuscular fat (IMF). We will have updated EPDs as well as ultrasound ratios on our website as soon as they are available, as well as on the sale day supplement sheet.

Please check back at MushrushRanches.com and follow our social media for updated data, sale cattle videos, etc.

Sustainable profitability in the cow/calf sector requires reproductive success, and Lot 109's "off-the-charts" fertility EPD predicts just that. Add in an equally impressive Feed Efficiency EPD and it's easy to see why this bull excels for both \$Ranch and \$Profit. He also stacks some of our most fertile and productive females in his pedigree. His dam, B101 maintains a 362-day calving interval and a 107 average progeny weaning ratio. His paternal grandam, Z053 had a 365-day calving interval and a 107 average progeny weaning ratio.

This easy keeping, big middled Jocko son is an excellent bull to put on wet 2-year-olds or mature cows. He posted an average daily gain (ADG) ratio of 115, and did it with less feed. Just look at his superior feed efficiency (F:G).

Only 35 bulls to go, and here's one of the best cow herd builders in the entire offering. His dam has an amazing production history with a 366-day calving interval and average progeny weaning ratio of 111. Combine that with his "better than Top 1%" ranks for Fertility and \$Ranch and you'll be glad Lot 134 is the sire of your next crop of replacements.

Congratulations to Dale and Judy Putman for their success at Flint Hills Beef Fest with a set of Mushrush Red Angus sired steers.

Lot 150 is ideal for heifers, but there's more to him than his lightest 1% birthweight. He is just as good at Feed Efficiency, Maternal Calving Ease, Fertility, Marbling and REA.

We're about 15 lots till the registered "U-Pick-Em" open yearling heifers sell. Again this year we've worked with the heifers and they are a very docile group.

Thank You Red Angus & Simangus Bull Buyers. Heifer Buyers get Ready!

HERD SIRE HIGHLIGHTS

Impressive to Impact and on to Icon, this line has been built on our best cows. Icon's daughters have beautiful udders and are the type that just settle. We have used him in countless heifer projects and you have seen many, many sons make our bull sales. His son K530 sells as Lot 30 and ranks in the top 3/10 of 1% for \$Ranch, which is the second highest \$Ranch in the sale. Other Icon progeny selling include:

Fall Bulls: 21, 30, 33, 56, 59, 71, 78, 79, 90, 91, 95, 102, 103 and 106

Spring Bulls: 113, 115, 131, 134, 152 and 169

Yearling Open Heifers: 305A, 305B, 306A and 306B

Top Tier is an outcross sire that maintains our moderate frame size while giving his progeny a dark, slick hair coat and excellent calving ease with rapid early growth. If you do a paper sort, they will rise to the top on ProS, \$Profit, and marbling sorts. Top Tier progeny in this sale include:

Fall Bulls: 1, 3, 17, 18, 31, 48, 53, and 60

Spring Bulls: 118, 121, 139, 145 and 157

Additional Outcross Sires Include!

Cornerstone - High \$Profit sire with elite Marbling and Feed Efficiency

BamBam - Blazed-faced Fleck sire to add bone and mass. Selling some powerful F1 Blaze-faced sons

Te Mania Red Label - a high marbling Australian Red Angus bull. Selling ET sons out of two outstanding Mushrush donors.

DVO Outspoken - Selling one son out of the dam of Jocko

Authority - Calving Ease and Marbling breed leader.

Coleman Poncho - Half-sib to SAV Rainfall, and similarly improves feet, hair coat and maternal value. Selling a select group of Black/Red Sons.

SAV Rainfall - High Accuracy Angus Sire known to improve foot structure and hair shedding. Selling some powerful Black/Red Sons.

Jocko is out of our outstanding C531 cow. She is a slick haired, easy fleshing, HIGHLY productive Impact daughter, whose pedigree you will see in many of our cattle in the future. The calves are the cattleman's kind - very solid across all traits but skew maternal.

As a bonus, there are 7 maternal half-brothers in the sale.

Jocko progeny selling include:

Spring Bulls: 122, 128, 129, 132, 138, 142, 151, and 158

Yearling Open Heifers: 304A and 304B

10 Commercial Open Yearling Heifers: 201-

Hollywood is the Nation's best option for Red, Multi-Trait SimAngus. While, he isn't exactly a new sire, this year will represent the first time he was used AI and had the chance to be a dominate natural service sire. If you want a Red SimAngus bull that will give the hybrid vigor and growth you are looking for with the added bonus of amazing cow herd traits, all while keeping birthweight and mature cow size in check - Pick Hollywood. His son, K707, sells as Lot 10 and is one of the best bulls we have ever offered for sale. Other Hollywood progeny include:

Fall Bulls: 11, 12, 27, 28, 29, 45, 46, 67, 68, 86 and 87

Spring Bulls: 114, 124, 126 138, and 147

COMMERCIAL RED ANGUS HEIFERS - Lot 201

25 - Commercial Red Angus Fall Calving Cows (Due to start calving Sept. 15, 2024 for 45 days)

Recipient cows from our home ranch, these cow are pregnant with a natural service calf instead of a Registered embryo. As good as he is, Dr. Joel Anderson can't stick them all. Sires are the same Mushrush Red Angus herd sires we use on our registered cows. H556- 4413465 and 0461H-4419733. After preg check we will group the cows into sale lots by age.

20 - Fall Born Commercial Red Angus Fall Calving Bred Heifers

These heifers were AI bred on December 4 -5, 2023 to calving ease Mushrush Red Angus herd sires and then run right with our registered heifers, exposed natural service to K065-,4643361 K213-4643617, K607-4751583, K517- 4751535 for 55 days. The AI bred heifers will calve around September 1, 2024 with the natural service bred heifers starting about September 20, 2024 for 40 days. Bangs vaccinated, BVD-Pi negative, and current on all vaccinations. Heifers will be lotted after preg check in groups of like kind and calving date.

10 - Commercial Red Angus Open Yearling Replacement Heifers

These fancy commercial heifers are ready to breed this spring. All half sisters are out of Ref. sire G Mushrush Jocko H822. These heifers are Bangs vaccinated, tested BVD-PI negative and are current on all vaccinations. In addition they have undergone a Reproductive Tract Score by Dr. Joel Anderson, Cross Country Genetics, to ensure they are cycling and have no tract abnormalities including small or irregular pelvic opening. From our ET recipient herd, Rolling Prairie Ranch, Hatfield, MO, they were born and raised on fescue.

A heifer supplement sheet with lot details and expected calving dates will be available sale day and on our website MushrushRanches.com after they are preg checked.

We are unable to offer free delivery on heifers but will work with buyers to get them delivered at the least possible cost.

REGISTERED RED ANGUS YEARLING HEIFERS

Mushrush Red Angus is once again offering a “Hand Picked” selection of Open Registered Yearling Heifers from the Top of our program. These are the heifers we’d normally keep for ourselves. In fact, you get to determine our replacements, as these heifers will be offered in a “U-Pick-Em” format.

Two half-sisters will be offered in each lot; the winning bidder will decide which heifer they want and which heifer will return to our replacement pen.

- 1) Stay tuned to MushrushRanches.com and our social media posts for links to the videos of these front-pasture females.
- 2) If you can't make the sale in person, Joe, Daniel or Greg Comstock will be more than happy to compare these heifers for you.
- 3) To ensure you get “Your Pick” absentee bidders can wait until they pick the heifers up to make their selection.
- 4) We are unable to offer free delivery on heifers but will work with buyers to get them delivered at the least possible cost.

We lead off the 2024 “U-Pick-Em” heifers with a pair of half sisters by Ultra-Kool 86H, who moderates mature weight without supressing growth through yearling. These sisters both excel for fertility and moderate mature weight and still predict yearling growth in the top 25% of the breed. Whichever one you pick, we’re getting to keep a docile, easy keeping replacement that ranks in the single digits for \$Ranch. Selection for \$Ranch over time will lead to more pounds of calf marketed per acre through improved stocking rates, increased fertility and lower feed and replacement costs.

Lot 302 features the choice of two fancy daughters of Cornerstone, who excels for Feed Efficiency, Calving Ease, Marbling, Fertility and Profit! Here's two of the high performing heifers in our entire spring 2023 calf crop earning weaning weight ratios of 116 and 125 respectively. That's why we sell choice; it's hard enough to part with just one of these powerful replacements. Their dams are both up-and-coming females in the Mushrush herd as indicated by their superior MPPA's.

As more progeny data comes in, Authority's reputation as a sire to improve Feed Efficiency, moderate mature size and make highly functional daughters continues to grow. This pair of deep-ribbed Authority half-sisters are dog gentle and either choice will make solid contributions to improve the economically relevant traits of: feed efficiency, fertility, marbling and moderate mature size.

Logical arguments can be made for either one of these Jocko daughters! Both of their 5-year-old dams are easy fleshing and maintain sub-370-day calving intervals, so no surprise they both excel for Fertility and \$Ranch. Both sisters represent strong cow families; the dam of Lot 304B has an incredible 114 average progeny weaning ratio, while the maternal granddam of 304A has weaned 4 calves with an average WW ratio of 110.

We have many Icon daughters in our herd, and that's the only reason we're sharing either of these half-siblings. Look how similar these two are for Docility, Feed Efficiency, HPG, Fertility, \$Ranch and \$Profit. Both of these females are deep through their heart girth and have plenty of shape down in their lower rib.

If you missed out on your pick of the Icon daughters that sold back at Lot 305, here's your mulligan! These two are just as docile, just as deep ribbed, and just as good on paper. If you've watched from the sidelines while other programs make significant progress to improve Feed Efficiency (F:G), this pair might be as good as it gets. Here's another pair of cow makers with best 7% \$Ranch, and they both come with elite ranks for F:G.

When you make your choice, you're also making ours - that's why we try to pair these heifers so evenly. So we'll be happy with whichever one you leave for us. While having the siblings matched so evenly might seem like it makes your job tougher - it actually removes a lot of the risk. We're confident both of these Ole F572 daughters are going to make easy keeping, problem free, highly productive females.

There was a time when folks didn't think the calves out of a 2-year-old were ever good enough to make a herd bull or a replacement, but our two-year-olds more than hold their own. You'll find bulls in the front of the sale order and almost 40% of the U-Pick-Em heifers are out of 2-year-olds. We believe that is a result of decades of selection for rapid early growth, moderate mature size, and superior fertility. These two heifers will be even better two-year-olds than their dams.

REF SIRE X - MUSHRUSH LEGIONAIRE G144

SALE TERMS & CONDITIONS

Bidding: Each animal on which there are two or more bids will be sold to the highest bidder. Announcements from the auction block will take precedence over the printed matter in the catalog.

Terms: Terms of the sale are cash unless prior credit arrangements have been made with the sellers.

Purchasers Risk: Each animal becomes the risk of the purchaser as soon as sold. Care will be provided by the seller free for 48 hours for those hauling their own.

Trucking: Trucking will be provided at purchasers risk for free on bull purchases for the first 700 miles, nationwide for purchases over \$30,000, or free care until May 1. **See page 3 for details.**

Certificate of Registry: A certificate of registry and transfer will be furnished for each animal sold as a registered animal, after settlement has been made.

Health: All cattle will have official health certificates to allow shipment anywhere in the U.S.

Breeders guarantee: All bulls sold are guaranteed for fertility, structural soundness and disposition for a period of six months following the sale. Each bull has passed a breeding soundness exam including semen test. Any bull showing difficulties in one of these areas, and if in healthy condition, may be returned to the site of the sale at buyers expense. The seller, at his option, may either refund the purchase price to the buyer or provide credit towards purchase of a replacement animal. All claims regarding breeding difficulties must be accompanied by a letter from a licensed veterinarian to that effect, such statement also indicating that the difficulty is not the result of injury or illness following the delivery. Buyers wishing for protection against injury or death of their bull/s may purchase the optional Bull Warranty (**page 6**).

Liability: Every precaution will be taken for the safety and comfort of those who attend the auction. All persons who attend the sale do so at their own risk, and the owner, auctioneer, clerks, and other employees assume no liability, legal or otherwise, for any accidents which may occur.

Genetic Defects: We have examined all pedigrees and performed DNA testing on individuals or pedigrees deemed susceptible to possessing a known genetic defect. We fully guarantee all animals in this sale to be free of any genetic defect monitored by the Red Angus Association of American on the date of the sale. If the buyer can prove otherwise with a parent verified DNA test, we will replace the animal in question in accordance with our Breeders guarantee.

Contract: The above terms and conditions shall constitute a contract between the buyer and seller of each animal sold.

Implied warranty: The warranties and guarantees on this page of Sale Terms and Conditions are in lieu of all other warranties, and the remedies given are the sole remedies of the buyer. Except for the provisions stated on this page, there are no warranties of any kind on the animals in this sale as to the merchantability or fitness for a particular purpose.

Announcements from the auction block will take precedence over the printed matter in the catalog.

Thank you from all of us at Mushrush Red Angus!
Mark your calendars for next years sale: March 21, 2025

PRIVATE TREATY COMMERCIAL HEIFERS

Contracting now thru summer: 500 Spring Calving Commercial Red Angus bred heifers Available fall of 2024

Sourced from longtime customers, these heifers will have been thoroughly scrutinized and culled by the time you pick them up in October. All heifers will be:

- BVD- PI tested negative
- OCV
- Be tract scored for irregularities prior to breeding
- Bred by timed A.I., then exposed natural service to Mushrush Red Angus calving ease (top 10%) bulls for 45 days
- Ready to turn out until calving as an aggressive health protocol is followed with a final boost given at confirmation preg check in October

These heifers will be A.I. bred around the middle of May with a projected calving date of 2/15/2025.

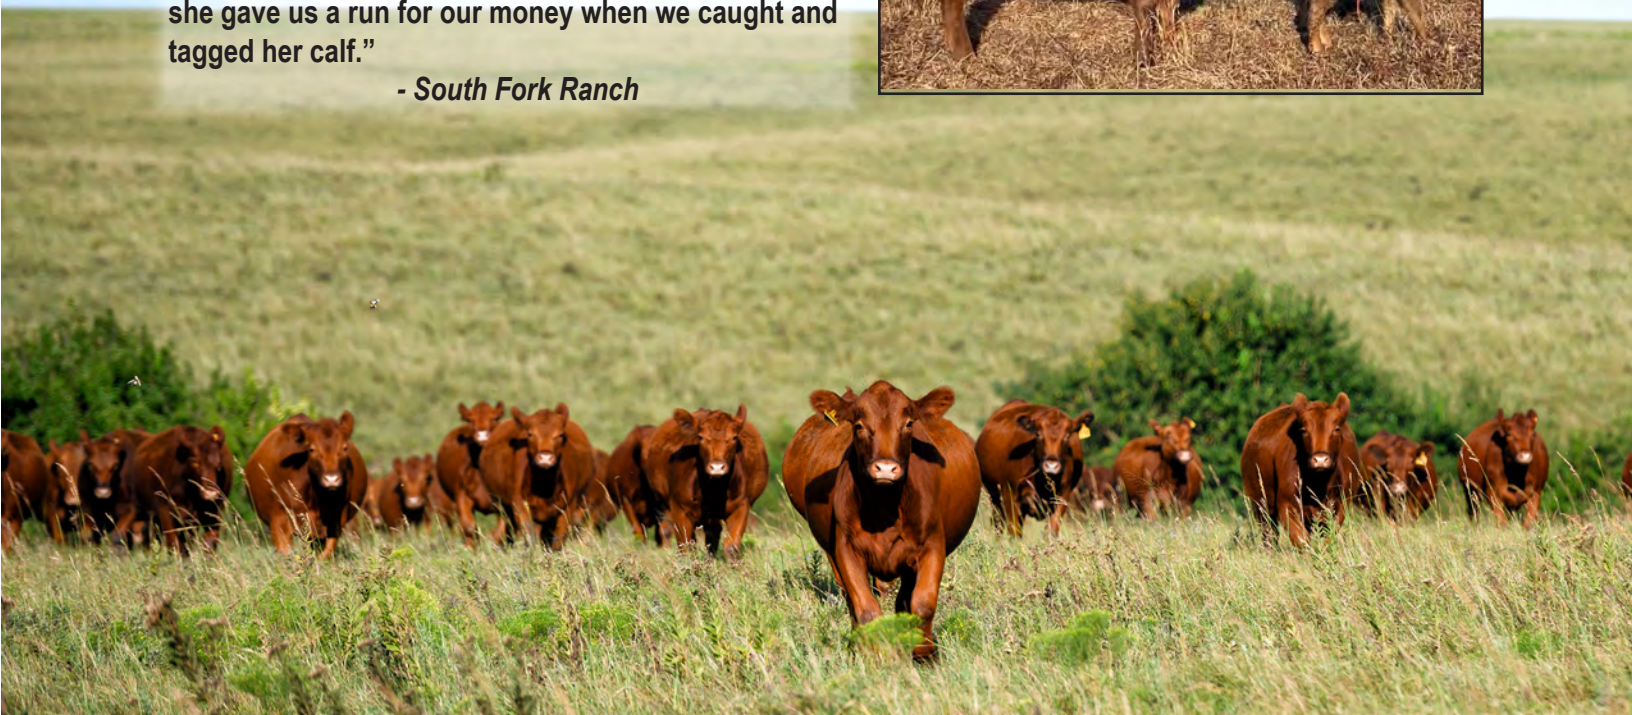

You can contract 1 or 100+

For more information call: Joe 620.340.7461 • Daniel 620.340.9774

“We’re very impressed with the vigor the Dorado calves are showing at birth. They want to get up and nurse before their mothers even have a chance to get them cleaned off and dry.

We witnessed a calf present two front feet, complete delivery, stand and nurse in 8 minutes! 2 hours later she gave us a run for our money when we caught and tagged her calf.”
